BETTER STRUCTURES WITH BETTER TECHNOLOGY

Building Information Model (BIM)

ILD has gone a step ahead by bringing internationally adopted 4D Building Information Modelling (BIM) in their projects. BIM is the latest way of approaching the design and documentation of building projects.

The model manages information that allows the automatic generation of accurate drawings and reports, design analysis, schedule simulation, facilities management and more – ultimately enabling the building team to make better-informed decisions. The BIM approach saves time and enhances productivity for a superior delivery of the final product.

Monolithic Aluminium Formwork Technology

It is an excellent replacement of the conventional technology with marked advantages in terms of structural stability, both on lateral movements, seismic forces, higher carpet area, uniform quality of construction, negligible maintenance and effect of wind forces on high rise buildings.
